### Recommendation Letter

JCommerce SA has been working with us since 05.2012. After three months of close cooperation in web and mobile android development, we experience JCommerce as a very professional company with the right mix of technical and project management skills.

The purpose of the project was the development of a complete guide to the Tour De France: stage descriptions, rankings, overviews etc. The service is the classic information application made in Java technology, which uses an external data provider.

Key technologies and components used in creating solutions were as follow:

- backend: Java, Spring 3.1 (MVC Cache), SimpleXML, Jackson
- frontend: HTML 5, CSS 3, Javascript, jQuery (Templates), JSON

In the framework of cooperation, all work on the project were made in accordance with functional specification. During our collaboration experts from JCommerce showed their strong commitment and knowledge of the project context and requirements - with an absolute minimum of communication overhead. We experience JCommerce as a company with hard working people, very committed to quality and deadlines.

Furthermore, with the full conviction we can recommend JCommerce SA as a good and reliable partner, providing its IT services on the highest possible level.

Gert François
