

# IoT by Inetum

## Consulting

- Strategic setup
- Business needs verification
- System architecture

## Use-case development

- Requirement analysis
- Feasibility study
- Design
- MVP / POC development

## E2E Platform implementation

- Deployment
- Networking
- Security
- Scaling

## Application development

- Core microservices
- Custom end-user applications
- Connectivity agents

## Systems and data integrations

- Data model and storage
- Data adapters and ingestion
- External systems adapters

## 24/7 support and maintenance

- 1st, 2nd, 3rd line of support
- Change requests and customizations

## Partners

## Value proposition

### IOT INTEGRATION

Designing and implementing integration with your device network including near-real-time (stream) processing of your data

### AI & MACHINE LEARNING

Creating environments and pipelines for solving your unique custom problems with Machine-Learning Techniques

### CLOUD DATA ANALYTICS

Designing and delivering Cloud-Base Data Processing pipelines integrating your private (on-premise) data sources with cloud-based tools

### DATA ACCESS PORTALS

Presenting the outcomes of Data Processing systems in a user-friendly way on custom Portals and Dashboards

**Przemysław SANIAK**

Business Development Director
